

Extension Summary

GRADE 4 Mathematics Extension 40211

Student: Pasqual
Grade 4 Math

CCLS Code: 4.NBT
Extension 40211

Extension: Identify place-value of a digit in a number containing three or more digits. (For example: present the student with the number 123. Ask the student to identify the number in the tens place. Correct work example would be that the student identifies “2” as being in the tens place.) (40211)

Task: The student will indicate the requested digit for a given three-or-more-digit number (e.g., in the number 154, what digit is in the tens place?). (AT40211C)

Note: In this sample, some of the distractors are very implausible. Teachers have this flexibility based on the needs of the student. Also, the evidence for the Final is the same as the Baseline. This is acceptable, and may be considered a time-saver for teachers. Teachers should evaluate whether doing this is the best way to assess the student.
