

# NYSAA Extension Summary

## High School Math Extension 91411

Student: Aadi  
High School Math

CCLS Code: G-GPE  
Extension 91411

Extension: Identify a geometric shape and/or concept on a coordinate grid.  
(91411)

Task: The student will identify a geometric shape and/or concept on a coordinate grid. (AT91411A)

Note: In this sample, the coordinate grids presented to the student were made tactile. The notation indicates that the student indicated where the geometric shape was and the teacher placed the mark on the grid. To reduce the complexity of the task, only a single quadrant from the coordinate grid was presented to the student. The teacher only presented the student with three different opportunities to identify the geometric shape on the coordinate grid. Teachers have flexibility in determining the number of opportunities presented to the student.
